Polyethylene terephthalate (PET) is a thermoplastic resin of the polyester family, widely used in the production of food and beverage containers. PET's popularity originates from its high clarity and durability. The clarity of PET cups are unmatched by any other commonly used disposable plastic cup materials such as PP and PS. Karat® PET cold cups are not only freeze/heat resistant (-22°F to 180°F), but also crack resistant. Karat PET cups are used for a wide range of products such as iced tea, slushes, juice, ice cream, cold beer and more. Unlike other plastics, Karat PET is recyclable.

Polypropylene (PP) is usually semi-translucent and compared to Polyethylene Terephthalate (PET) that has a lower degree of clarity. Our Karat[®] PP cups are thinner for a higher degree of clarity than average translucent cups. Translucent plastic PP cups can hold up against temperatures of up to 200° F. Besides being heat resistant, PP is durable as well as oil and chemical resistant. Translucent PP cups are widely used for cold drinks such as iced teas, iced lattes, fountain drinks, slushes and more. PP is commonly recycled. It's resin identification is 5. Polystyrene (PS) is light-weight and economical. PS is recyclable.
